

## Guide Tube OLDA GT 8 (12)

### Function:

A guide tube is used together with flush bolts with round bolt, to ensure a secure bolting, especially in connection with prolonged bolts and/or long rods.

Guide tubes optimize the function of flush bolts by reducing the friction between bolt and its exit hole in the door leaf.

### Features:

Guide tubes OLDA GT are 20 mm deep with circular holes.

GT 8 (12) has hole  $\varnothing$  8,5 mm intended for bolt  $\varnothing$  8 mm, is made in electrozinc plated zinc and designed for flush bolts with lesser backset such as 34 HZA-DS and 36 HZM-DS. The rounded forend simplifies assembly in wooden doors.

### Usage:

OLDA GT guide tubes are recommended to secure the function and prolong the lifespan of flush bolts, and are recessed in doors made of wood, steel- or aluminium.

GT guide tubes are often used together with OLDA LT lock tubes with oval holes, in frame or sill, allowing for extra movement if the door leaf “hangs” over the years.

The combination of guide and lock tubes are especially important if the door leaf has automatic drop seals.

If a more precise lock tube with a circular hole is required, an OLDA GT can be used instead, since its hole is also countersunk.

### Installation:

Guide tube OLDA GT 8 (12) is fitted in the door leaf edge and is fastened with one countersunk 3.5 x 16 mm screw.

### Specification:

- Outer diameter: 14 mm
- Height: 20 mm
- Hole diameter: 8,5 mm
- Forend:
  - 35,5x15x2 mm
  - rounded corners
- Thickness: 2 mm
- Material: zinc
- Coating: electrozinc plating

### Related products:

- Strike plates
